                                                       The present invention relates to a method for early detection of active mycobacterial disease or infection comprises assaying a biological fluid sample for the presence of early antibodies specific for an 88-kDa Mycobacterium tuberculosis (Mt) protein or immune complexes consisting of an 88-kDa Mytobactusis protein antigen complexed with an antibody specific for the antigen. The method is useful for the early and rapid detection of mycobacterial disease, particularly tuberculosis, in individuals at heightened risk of developing tuberculosis. This individuals include human immunodeficiency virus (HtV)-infected subjects or other immunocompromised individuals. The method is a rapid and the present sequence is a Mt 88 kDa secreted protein early antigen, used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

The sequence represents Mycobacterium fusion protein antigen TbF14 consisting of a His tag for purification, antigen MtB81 and antigen Mc2. Compositions comprising at least 2 hererologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease, ADS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

RESULT 3

useful for

portion of M. tuberculosis antigens Mtb-81 and Mtb-67.2, use diagnosis, treatment and monitoring therapy of tuberculosis

Claim 1; Fig la-f; 91pp; English.

Polypeptides comprising an immunogenic portion of Mycobacterium tuberculosis antigens Mtb-81 or Mtb-67.2 or variants that differ by substitutions, additions, insertions and/or deletions but which still react with antigen specific antisers or T-cells are described. Also described are polymucleotides encoding the polypeptides. The polypeptides, expression vectors expressing the polypeptides or comprising an antisense polymucleotide, or an antigen presenting cell comprising a sequence encoding the polypeptides are useful for determining the presence or absence of M. tuberculosis in whole blood, serum, sputum, plasma, saliva, cerebrospinal fluid or urine in a patient infected with human immunodeficiency virus (HIV).

Nucleotides 1 to 574 can be isolated and used to regulate the expression of a proterin-encoding structural gene placed downstream of it, after incorporation into a vector and transfer into a Cornyeform bacterium. Induction of protein expression occurs even when the culture medium contains carbon sources other than acetate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 TDRVSVGNLRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NCOSILGYVVRWVDQGVGCSKVPDIHDVALMEDRATLRISSQLLANWLRHGVITSADVRA 659
The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium coryneform sequence of a gene derived from coryneform bacterium. Coryneform sactorials producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      434
                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

```
AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors [II] for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic amino acid (preferred), a purine or pyrimidine base, or nomproteinogenic amino acid (preferred), a purine or pyrimidine base, acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of [I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of corpusational diphtheriae in subject. (I), (III) or not cells containing them are used for diagnosing the presence or activity of containing them are used to map genomes of cognisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing the presence or activity of in evolutionary studies, in determining SMP protein regions required for for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).

metabolism and oxidative phosphorylation (SMP) proteins given in metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty a caid, a caid, a cabbydydrate, an around compound, a vitemin, a coffactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of corprabacterium diphtheriae in a subject. (I) (II). (III) or host cells containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to in evolutionary studies, in determining SMP protein regions required for function, in modulating sMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         428

The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The color polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a cod supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical cod supplement. (II) and its binding partners are useful in medical assorbing to repensive for general activity. (II) and (II) are useful in medical disorders involving aberrant protein esquences have applications in the polypeptide and polymuclectide sequences have applications in diagnostics, for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABGOOOIO-ABGSO377 represent novel human of diagnostic amino acid sequences of data and products dependent on DNA and consideration but was obtained in electronic format directly from WIPO specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             116 LVVPVLNARFALNAANARWGSLYDALYGTDVIPETDGAEKGPTYNKVRGDKVIAYARKFL 175

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerse chain reaction (PCR) primers. Oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of date and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the published pot_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                 The interaction (PCR) primars, oligomers, and for chromosome and purpeptide (II) sequences (I) brimers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of data and products dependent on DNA and amino acid sequences of the invention.

**Content of the produce of the tris patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the top when the printed specification, but was obtained in electronic format directly from WIPO.

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome conjunction and probability and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical inaging of sites expressing (11). (1) and (11) are useful in medical inspectors in the polypeptide and polymicleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and call sequences. Absd00010-Absd30377 represent novel human amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1061

                                                                                                                                                                                                                             Homo sapiens.
                 24-JUN-2002
                                                                                                                                                                                                                                                                                           06-DEC-2001
 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (FCR) primars, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The chromosome polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical insolutes involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in disponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Abg00010-Abg30377 represent novel human construction, but was obtained in electronic format directly from WIPO and the print of the financial common and the printed in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9 LRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQAQIDKWHR

The present the specification). ABN15762 to ABN27252 encode the human ORFX in the specification). ABN15762 to ABN27252 encode the human ORFX or proteins given in ABN00101 to 0.0 ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating or preventing a pathology associated with an ORFX polymucleotide syndrome associated with ORFX-associated disorder. ORFX polymucleotide squances can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders mellitus, systemic storage diseases, various immune deficiencies and disorders, inffectious diseases, autoimmune thyroiditis, ampathenia gravis, graft-versus-host disease and autoimmune inflammatory eve disease. ORFX proteins are also ö 9 61 N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. 2 TERVQGGSLQVAKVLYDFVVEEAVPGAGVDAETFWAGADKVITELAPKNRDLLAKRDDLQ 1 TDRVSVGNLRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQ present invention describes substantially purified human proteins .. 0 Indels 11.0%; Score 420; DB 23; 59.7%; Pred. This sequence was then joined by the 3' sequence of exon 5 of sheep growth hormone gene. Minor sequence modification around the initiation codon of the bacrerial aceb gene was made by site-directed mutagenesis. The construct was transferred to transgenic mice and the mice were analysed for expression of malate synthase. The value for expression (nmoles product formed/mg See AAAQ43177-Q43183.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Preparing L-amino acids, e.g. L-threonine, by fermenting microorganisms of Enterobacteriaceae family in which the aceB gene is attenuated, in particular eliminated, and isolating L-amino acid from culture medium -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises a method of preparing L-amino acids. The method involves fermenting microorganisms of Enterobacteriaceae family that produce the desired L-amino acid, in which the aceB (malate synthase A) agene is eliminated. The method is useful for preparing L-amino acids (e.g. L-threonine). The L-amino acids produced by the method of the invention are useful in human medicine and in the pharmaceuticals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Enzyme, L-amino acid preparation, malate synthase A; aceB; L-threonine, human medicine, pharmaceutical industry, foodstuffs, animal nutrition.
